LightPoleSigns.com is Revolutionizing Outdoor Sign Advertising. Get ready to harness untapped marketing potential and pave the way for fresh streams of income with this groundbreaking invention.

LightPoleSigns.com leads the way with 5 new innovative hardware products and 5 new cutting edge graphic options that promise to transform the landscape of outdoor retail advertising. Presenting the **Swivel Pro Light Pole Sign**, featuring an exclusive wind release spring swivel arm and making use of a durable outdoor sign board that outperforms existing vinyl banner alternatives in the market. This synergy enables your company to generate extra profits from hardware, design, graphics, installation, and foster enduring relationships with your clients.

Rest easy, as LightPoleSigns.com provides a 1-year warranty for both the hardware and sign boards, ensuring your peace of mind.

The bracket arm of the **Swivel Pro Light Pole Sign** is equipped with an exclusive wind release spring pivot swivel mechanism, enabling it to rotate with the wind and alleviating wind pressure to safeguard the integrity of the sign board graphics. Designed to withstand outdoor conditions, the sign boards utilize durable 5mm Alupalite™ material, boasting double-sided aluminum panels digitally adorned with UV ink. Choose from our array of standard sizes: 24" x 48", 24" x 72", and 24" x 96". Opting for a distinct size? Look no further than our custom dimension choices. If you possess a creative flair, our die-cutting services have the power to infuse your signs with an enchanting 3D dimension. Moreover, our full and partial vinyl wraps, complemented by Velcro attachments, offer a spectrum of additional visual choices for an extensive range of signage alternatives, setting you apart from the rest. Our pole signs, designed for easy installation, boasting a lightweight structure, and exceptional strength, offer an unmistakably prominent signage solution.

### Swivel Pro™ Light Pole Sign Hardware Includes:

## **Frequently Asked Questions:**

### **Q – What type / size light poles do these signs work on?**

A – The SureGrip™ Pole Brackets are 3.5" wide with an arc that accommodates both square and round poles. The minimum pole width is 4". The maximum pole size is only limited by the length of the hose clamps. The bracket kit hose clamp length is 35.25" with a radius of around 10". If you have larger poles than 10" let us know what your requirements are and we will find a solution.

### **Q – What is the difference between the Swivel Pro Light Pole Sign and the Swivel Flex Pole Sign?**

A – The hardware and sign swivel mechanisms on both units are the same. The Swivel Pro Light Pole Signs do not have solar LED lights. The Swivel Flex Pole Signs include the solar LED Lights.

### **Q – What is the difference between a light pole sign and a pole sign?**

A – If the pole has an overhead light we refer to it as a light pole sign and if the pole does not have an overhead light we refer to it as a pole sign. Most poles are light pole signs with overhead lights, however there are some poles that do not have overhead lights so we offer the Swivel Pro Flex Pole Sign with solar LED lights. (note: the solar LED light day and night sensors may not be effective in well lit areas.)

### **Q – How do the Solar LED Lights work?**

A – The solar LED lights have a day night sensor. They turn on at dusk and turn off at sunrise. The solar LED lights are recommended for areas without competing light sources, so the night sensor will activate and turn on the LED lights. The night sensor may not be effective in well lit areas. The solar LED lights are standard on the Swivel Flex Light Pole Sign and optional on the Aero Flex Wall Sign.

### **Q – How much maintenance is required on these signs?**

A – These signs are designed to reduce service calls with very little maintenance. Each bracket arm has 2 maintenance free enclosed ball bearing rings that allow for the rotation of the swivel arm. The SureGrip Pole Bracket is connected to the bracket arm with 2 screws, 2 washers and 2 locking nuts and the sign board is connected to the swivel arms at the top and bottom with 4 screws, 4 washers and 4 locking nuts. The locking nuts are designed to stay tight but you could check them occasionally to confirm they are tight.

### **Q – What is the best selling product?**

A – The best selling product is the Swivel Pro Light Pole Sign. The most popular size is the 24" x 72" with the 24" x 96" close behind.
